Regulatory Change – Executive Compensation Disclosures

Regulatory Change – Executive Compensation Disclosures

Why CD&A?

Firms are required to cover six elements of executive compensation design in CD&A disclosures:

- the objectives of the compensation program;
- what the compensation program is designed to reward;
- each element of compensation;
- why the issuer chooses to pay each element;
- how the issuer determines the amount and formula for each element; and
- how each element of compensation and the issuer's decisions about that element fit into the issuer's overall compensation objectives and affect decisions about other elements.

The 2006 rules grant managers considerable discretion in storytelling and justification activities.

Theoretical Framing and Research Questions

RQ1: What topics does management choose to emphasize in their CD&A disclosures?

Past CD&A studies have examined core textual characteristics such as tone and readability. For example,

- Balsam et al. (2016) find managers tend to use a positive tone when writing CD&A disclosures to reduce voting dissent among shareholders
- Laksmana et al. (2012) find that overpaid CEOs are motivated to reduce the readability of CD&A disclosures.
- Packard et al. (2023) conduct sentence-level tests, measuring the number of CD&A sentences containing performance-related words.

Meanwhile, non-CD&A studies have investigated the topical content of MD&A, 10-K reports, analyst reports, etc. using topic modeling techniques.

RQ2: How are CD&A topics affected by changes in accounting performance numbers?

Impression management: Managers' strategic selection and presentation of information in a deliberate attempt to "distort readers' perception of corporate achievements" (Godfrey et al., 2003, p. 96).

We posit that managers have a strong incentive to sway shareholder perceptions of compensation schemes and influence voting behavior by strategically manipulating the thematic content in their CD&A narratives, especially when there are shifts in accounting performance metrics.

Data and Method

Data

Sample selection		
	Number of CD&A Filings	Number of CD&A sentence-level observations
All CD&A documents filed by S&P 1500 firms over fiscal years 2006 to 2015	13,433	
Less: Duplicated filings	(15)	
Less: Unavailable firm-year observations in Compustat database	(361)	
Primary sample	13,057	2,258,574
Less: sentences with less than 30 characters		(278,540)
Final sample		1,980,034

Method - Measuring Topics

Stage 1: Pre-defining an
“accounting” topic

Identifying a frequency
listing of all the terms in our
sample of CD&A sentences.

Selecting a list of relevant accounting terms from the
frequency listing: tax, taxes, cost, costs, expense, expenses,
income, earnings, revenue, revenues, netincome, profit,
asset, assets, ebit, ebitda, and accounting.

Stage 2: Conducting topic modeling

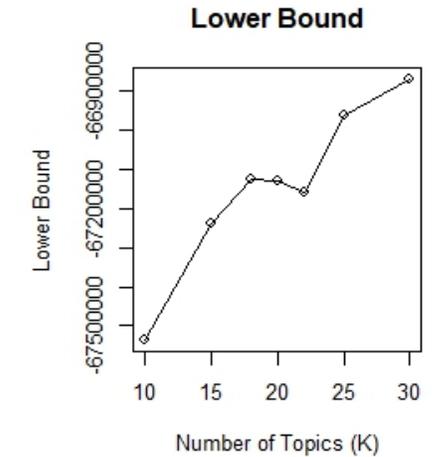

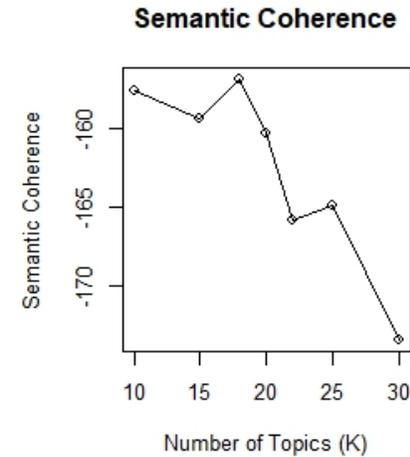

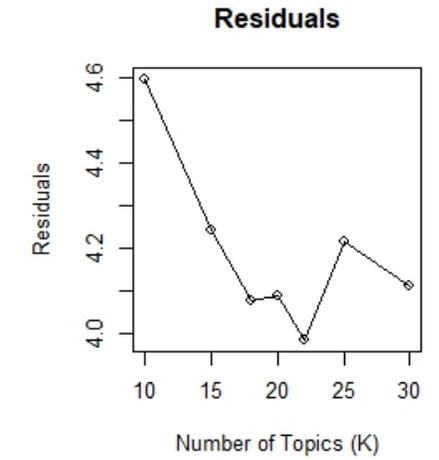

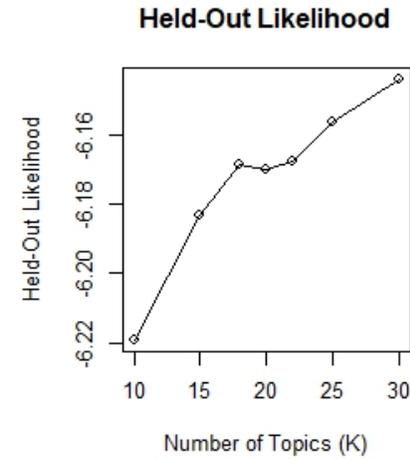

Removing the accounting terms

Using LDA approach to determine the optimal number of topics and extract topical content.

Using LDA approach to extract **frequent-and-exclusive (FREX)** words for each topic.

For each of the 19 topics, assigning a value of 1 to variable $TOPIC_i$ in a given sentence if the sentence contains at least one FREX word from topic i , and zero otherwise.

Creating $TOPIC_j$ for each of the eight combined topics.

Method – Measuring Performance Number Change

Our proxy for the change in accounting performance is the year-over-year change in ROA (net income over total assets).

Method – LASSO regression

Least Absolute Shrinkage and Selection Operator (LASSO) regression:

- The primary goal of LASSO regression is to find a balance between model simplicity and accuracy.
- It achieves this by adding a penalty term to the traditional linear regression model, which encourages sparse solutions where some coefficients are forced to be exactly zero.
- This feature makes LASSO particularly useful for feature selection, as it can automatically identify and discard irrelevant or redundant variables.

For 19 individual topics: $ROA_INCREASE = \alpha + \beta_i \times TOPIC_i + CONTROLS$

For 8 combined topics: $ROA_INCREASE = \alpha + \beta_j \times TOPIC_j + CONTROLS$

Topical Content - Representative Sentences

TOPIC_{Incentives}

Long-term incentives are designed to tie a significant portion of our named executive officers' compensation to our performance, create a meaningful alignment of our named executive officers' financial interests with those of stockholders, and encourage long term retention.

TOPIC_{Stock}

Stock options granted by us have an exercise price equal to the fair market value of our common stock on the day of grant, typically vest over a three-year period (with 33% vesting 12 months after the grant date and the remainder vesting ratably each year thereafter based upon continued employment) and generally expire five years after the date of grant.

TOPIC_{Market}

For fiscal year 2011, these survey sources were the Hewitt TCM Executive Survey, the Mercer Benchmark Database Survey, the Towers Perrin CDB Executive Survey, and the Watson Wyatt Top Management Survey.

Discussion

- We identify 19 conceptually significant topics organized into eight broad categories; Of these, the topics in the *accounting*, *aligning interests*, *pay-for-performance* categories are more pervasive than others.
- Our LASSO regressions for RQ2 suggest that an increase in ROA leads managers to emphasize certain CD&A topics, particularly those related to *aligning interests* and *compliance*.
- Contributions:
 - Providing a more detailed understanding of CD&A disclosures;
 - Showing that topic adoption is an impression management technique;
 - Offering practical value to policymakers and investors.

THANK YOU
