Research Profile

My research examines the consumption and production of language to advance psychological theories on motivation, social perception, and persuasion. I employ laboratory experiments, automated text analysis methods, and econometric analysis of field data using a variety of approaches (e.g., ANOVA, multi-variate regression, panel estimators, topic modeling, machine learning).

This work offers insights for marketers, consumers, and policymakers on the verbal information people share across a range of contexts (e.g., customer service interactions, social media, online reviews). It also helps brands and their employees improve how they communicate with, and to, consumers. Finally, I examine how and why language itself is consumed in cultural products like song lyrics and academic research articles.
