#3 IN THE WORLD in the field of responsible business among large MBA programs *(Corporate Knights)*
TOP 100 IN THE WORLD for Career Outcomes *(LinkedIn & QS)*
TOP 30 MOST POPULAR MBA PROGRAM in the World *(mba.com)*
TOP 30 IN THE WORLD for careers in Finance, Technology & Information Management *(QS TopMBA)*

Ranking results as of April 2026

A Message from the Director, Centre for Career Design

> This year marks a milestone for Schulich: the graduation of the very first cohort of the MBA in Technology Leadership (Tech MBA) — a program unique in Canada — and I couldn't be prouder to share what this inaugural class accomplished.

Every single student in this graduating class secured their mandatory final-term internship — a remarkable achievement for a brand-new program still building its employer relationships from the ground up. Of those, 50% converted their internship into a full-time offer, and 85% of the graduating class had secured employment within six months of graduation.

Our corporate partners consistently point to the same qualities when describing this cohort: sharp technical fluency, genuine professionalism, and a curiosity that never seems to switch off. That combination — depth of skill paired with a real hunger to keep learning — is exactly what this new program set out to cultivate, and this class delivered on that promise from day one.

None of this happens in isolation. Our Tech MBA Advisory Council, our corporate partners, and our alumni community all played an essential role in shaping this program's first year — offering guidance, opening doors, and helping students navigate a job market that continues to shift in real time. We are deeply grateful for that trust and partnership, especially as we built this together for the first time.

At the Schulich Centre for Career Design, our work is grounded in five values that guide everything we do: integrity, service, expertise, empathy, and enthusiasm. Those values shaped how we supported this inaugural cohort in designing careers that are not just successful, but genuinely meaningful — and how we built the connections that created value for students and employers alike.

It is a true privilege to share this report and to celebrate the achievements of Schulich's first-ever Tech MBA graduating class — a group that didn't just complete a program, but helped build it.

Minerva Cernea (She/Her)
Director, Centre for Career Design
Schulich School of Business

Alumni Reflections

Ayomikun Akintayo
(Tech MBA '24)

Senior Specialist, Store Application and Support (Technology Risk and GRC), Loblaw Companies Limited

How did the Schulich MBA in Technology Leadership (Tech MBA) program align with your career goals and personal aspirations?

The program aligned closely with where I wanted to take my career: from hands-on technology risk and GRC work into strategic leadership. Before starting, I had already built enterprise risk frameworks, first in banking and then in fintech, but I wanted the structured business and technology leadership grounding to match that experience. The Tech MBA gave me the language and frameworks to connect technical risk work to business strategy and board-level decision-making, which has directly shaped how I approach my current role in technology risk governance.

How did the Professional Development course, CCD or broader Schulich network help you navigate a particular challenge or opportunity during the program or your job search?

The professional development coursework and the CCD's coaching and networking events gave me space to translate years of operational risk experience into a clear professional narrative for the Canadian market. Beyond resume and interview preparation, the broader Schulich network connected me with alumni working in risk, governance, and technology roles across the GTA, whose insight into how large financial institutions structure and value these functions was hard to find elsewhere. That network remains a resource I lean on as I continue building my career in technology risk leadership.

Which professional competency developed during the program do you feel is most integral to your work today, and why?

The competency I use most is translating complex technical and risk concepts into language that resonates with executives. Technology risk work only creates value when the people making decisions understand what is at stake and why it matters. The program sharpened my ability to build senior management-level business communication and reporting structures that are both technically sound and easy for non-technical stakeholders to act on. That skill has been central to every framework I have built, from vulnerability management programs to enterprise risk structures spanning the executives to junior staff.

How do you see the value of your Schulich degree evolving over time?

I expect the value of the degree to keep compounding. The credibility of the Schulich name continues to open conversations with employers, and the alumni network keeps expanding as classmates move into more senior roles across industries. As I move toward director-level technology risk and governance positions, I expect to draw more heavily on both the strategic frameworks I learned and the relationships I built during the program.

What advice would you give to students who are considering Schulich for their Tech MBA program?

If you are coming from a technical or risk background and want to move into leadership, the Tech MBA is built for exactly that transition. Get involved with the CCD early, treat the professional development coursework as seriously as your technical courses, and use the network deliberately. The relationships and frameworks you build during the program will matter as much as the credential itself once you are navigating real business decisions.

Simrat Atwal
(Tech MBA '24)

AI Program Manager,
Reliance Home Comfort

How did the Schulich MBA in Technology Leadership (Tech MBA) program align with your career goals and personal aspirations?

When I entered the Tech MBA, I was already working in technology and program management, but I wanted to move closer to the decisions that shape how organizations use technology. That became especially relevant during my time at Deloitte, where I worked on AI strategy and saw firsthand the difference between what is technically possible and what actually creates value for a business. Schulich helped me develop the judgment to bridge those worlds. Today, as an AI Program Manager at Reliance Home Comfort, I use that perspective to connect emerging technology with business priorities and practical outcomes.

How did the Professional Development course, CCD or broader Schulich network help you navigate a particular challenge or opportunity during the program or your job search?

One of the most valuable parts of the program was being surrounded by people with very different experiences from my own. Through Professional Development, the CCD and the broader Schulich community, I became more thoughtful about how I presented my experience and where I wanted my career to go. That was particularly helpful as my work became more focused on AI and I considered what I wanted my next step to look like. The network gave me people to learn from, test ideas with and turn to for perspective at important moments.

Which professional competency developed during the program do you feel is most integral to your work today, and why?

The competency I rely on most is the ability to communicate complex ideas clearly. In my work, I often sit between technical teams, business leaders and executives who see the same problem from different angles. Schulich taught me to understand what matters to each audience and frame the conversation around the decision that needs to be made. That ability to bring clarity to ambiguity has become an important part of how I lead.

How do you see the value of your Schulich degree evolving over time?

I think the value of the degree will continue to grow with time. Specific technologies will come and go, but the judgment to evaluate them, understand their business implications and lead through uncertainty is much more enduring. I also see increasing value in the relationships built at Schulich. As classmates and alumni grow in their careers, the network becomes a community of people whose perspectives, experiences and support continue well beyond graduation.

What advice would you give to students who are considering Schulich for their Tech MBA program?

I would tell prospective students to be curious and make the experience larger than the classroom. The coursework matters, but so do the conversations after class, the people you meet and the opportunities you pursue. Come prepared to challenge your assumptions and learn from people whose backgrounds are different from yours. If you engage fully, the Tech MBA can give you more than a credential; it can change how you think about technology, leadership and the career you want to build.

Alumni Reflections

Tharaniya Shanmugathasan (Tech MBA '24)

Product Management Consultant, Deloitte

How did the Schulich MBA in Technology Leadership (Tech MBA) program align with your career goals and personal aspirations?

The Schulich MBA in Technology Leadership was a natural next step in my career because I wanted to build on my experience in marketing, digital media, and client management while developing a much deeper understanding of technology, strategy, and business leadership. Before Schulich, I had the opportunity to work across organizations including Mars, Google, SkipTheDishes, and Finastra. These experiences helped me develop strong skills in understanding customers, analyzing data, managing stakeholders, and developing business strategies. However, I wanted to move beyond the execution of digital initiatives and become more involved in solving broader business problems through technology.

The Tech MBA gave me the opportunity to make that transition. What attracted me most was the ability to develop both a strong business foundation and an understanding of emerging technologies. Courses across areas such as emerging technologies, accounting, marketing, finance, and operations helped me understand how different parts of a business come together when making strategic decisions.

This was particularly valuable because technology decisions rarely exist in isolation; they need to align with customer needs, financial objectives, operational realities, and overall business strategy.

How did the Professional Development course, CCD or broader Schulich network help you navigate a particular challenge or opportunity during the program or your job search?

One of the most meaningful ways the Schulich community supported my career journey was through the Professional Development course and, in particular, my professor, Minerva. Her guidance and connections directly led to an opportunity that significantly shaped my career after the MBA.

At the time, I was exploring opportunities that would allow me to transition from my previous experience in digital marketing and media into technology and product management. I knew I wanted to build a career at the intersection of business and technology, but finding an opportunity that would allow me to demonstrate my capabilities in a technology-focused environment was an important challenge.

Through the Professional Development course, Minerva played an important role in helping me navigate that transition. Through her professional network, she had a connection with an AI Partner at Deloitte who was looking to provide opportunities to Schulich students. Because of that relationship, the Deloitte Partner generously offered two internship opportunities specifically to students within our cohort.

Which professional competency developed during the program do you feel is most integral to your work today, and why?

The professional competency that has become most integral to my work today is understanding how to identify and apply technology, particularly AI, to solve real business problems. My experience at Schulich helped me develop the ability to look beyond technology for the sake of technology and instead ask: What problem are we trying to solve, and how can technology create meaningful value for the business and its customers?

This competency has become especially relevant in my current role at Deloitte, where AI is increasingly integrated into the way we work and the solutions we deliver to clients. On a day-today basis, we use AI to improve how we analyze information, develop solutions, streamline processes, and support our project teams. At the same time, we are helping clients identify and implement AI-enabled features as part of broader technology implementations.

How do you see the value of your Schulich degree evolving over time?

I see the value of my Schulich degree evolving as my career progresses. Early in my career, the degree has provided me with knowledge, credibility, and a foundation for making a significant career transition. Over time, however, I believe its value will increasingly come from the perspective, network, and leadership capabilities I developed during the program.

What advice would you give to students who are considering Schulich for their Tech MBA program?

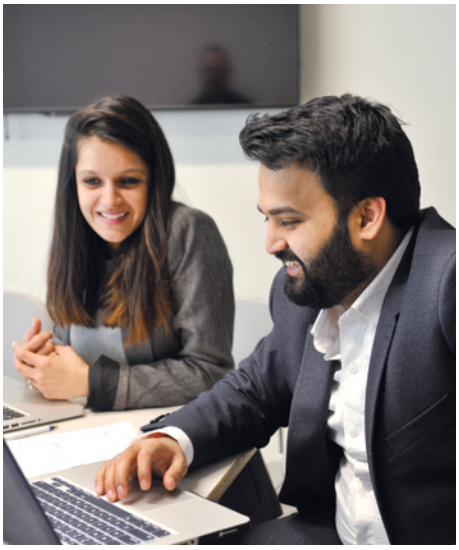

My biggest piece of advice would be to come into the Tech MBA with an open mind and take advantage of everything the program offers beyond the classroom. The academic component is important, but some of the most valuable learning experiences come from the people you meet, the perspectives you are exposed to, and the opportunities you pursue throughout the program.

I would especially encourage students to take advantage of the diversity of professional backgrounds within the Schulich community. My own career has included marketing, digital media, product management, and technology consulting, and the MBA gave me the opportunity to interact with people who approached business problems very differently from me. Those interactions challenged my thinking and helped me become more comfortable working across different functions and industries.

Corporate Engagement Highlights

Reported Hires: Tech MBA Class – Convocation February 2025

COMPANY	POSITION
Deloitte	• Associate Product Owner/Manager, Generative AI • AI Strategy Consultant, Omnia AI • MarTech Consultant
EQ Bank	• Associate Manager
Loblaw Companies Limited	• Technology Risk and GRC Governance, Stores Application
Mastercard	• Product Owner, Fraud & Intelligence Products
Panasonic Canada	• Commercial Product Manager – Healthcare, Beauty and Personal care
Roots Funding	• Chief Legal Officer
Strada Canada	• Associate Functional Consultant
Two Small Fish Ventures	• Investment Analyst

What Our Employers Are Saying

"Our partnership with Schulich reflects our confidence in the quality of its education and the technology leaders it is developing. Students in the Technology Leadership MBA bring a valuable combination of business perspective, curiosity, and an ability to think about how technology can solve real-world challenges — qualities we value at Loblaw.

The Schulich career team has been an important part of that partnership. They take the time to understand our business, our culture, and the capabilities we're building, helping connect us with students who can contribute and grow within our organization.

At Loblaw, students have the opportunity to apply what they are learning to real business challenges and experience technology at significant scale. That hands-on exposure helps them build practical skills and understand what it takes to drive change in a complex, customer-focused organization. At the same time, we benefit from the perspectives and ideas that emerging technology leaders bring to our teams.

We're proud to continue our partnership with Schulich, giving students the opportunity to make a tangible impact while discovering the breadth of technology careers at Loblaw and the role technology plays in helping Canadians live life well."

David Markwell
Chief Technology and Analytics Officer
Loblaw Companies Limited

Loblaw Companies Limited

"Over the past several years, Deloitte has worked closely with the Schulich School of Business to help bridge the gap between academia and industry. What started as a collaboration focused on analytics, AI, and experiential learning has grown into a broader relationship centered on developing talent and creating meaningful opportunities for students.

One of the things that stands out most about Schulich Tech MBA students is their ability to combine strong technical foundations with business thinking. In client environments, technical skills alone are rarely enough. Success requires curiosity, communication, adaptability, and the confidence to work through ambiguity. We have consistently seen those qualities in the students we have engaged through the program.

Our continued engagement reflects the confidence we have developed in the quality of the students and the value of the program. Most recently, two Tech MBA internships resulted in full-time hires at Deloitte, building on the positive experiences we have had with Schulich talent over the years. Both individuals integrated quickly into project teams, contributed meaningfully to client work, and demonstrated the qualities we look for in future consultants. For us, that is perhaps the strongest endorsement of the program."
